

## Stainless Steel Cleaning Products/Tips

---

Jif Cream Cleanser

Stainless Steel Wipes

Scotch Brite Scourer

Microfiber Cloths

The method to use is to apply Jif Cream Cleanser onto the yellow (soft) side of a green-back scourer and rub into the steel following the grain. Afterwards, use a clean damp soft cloth to remove any Jif residue then buff with a clean dry soft cloth.

Applying a stainless steel protective cleaner afterwards will put a protective film on the steel to reduce fingerprints or dirt in future.

All of these products are readily available at all supermarkets Australia wide.

Please feel free to phone our customer service department for further information.
